Select the 'AMD Unified Installed for FPGAs & Adaptive SoCs 2025.2: Windows Self Extracting Web Installer'

You will need an AMD account to download this product.

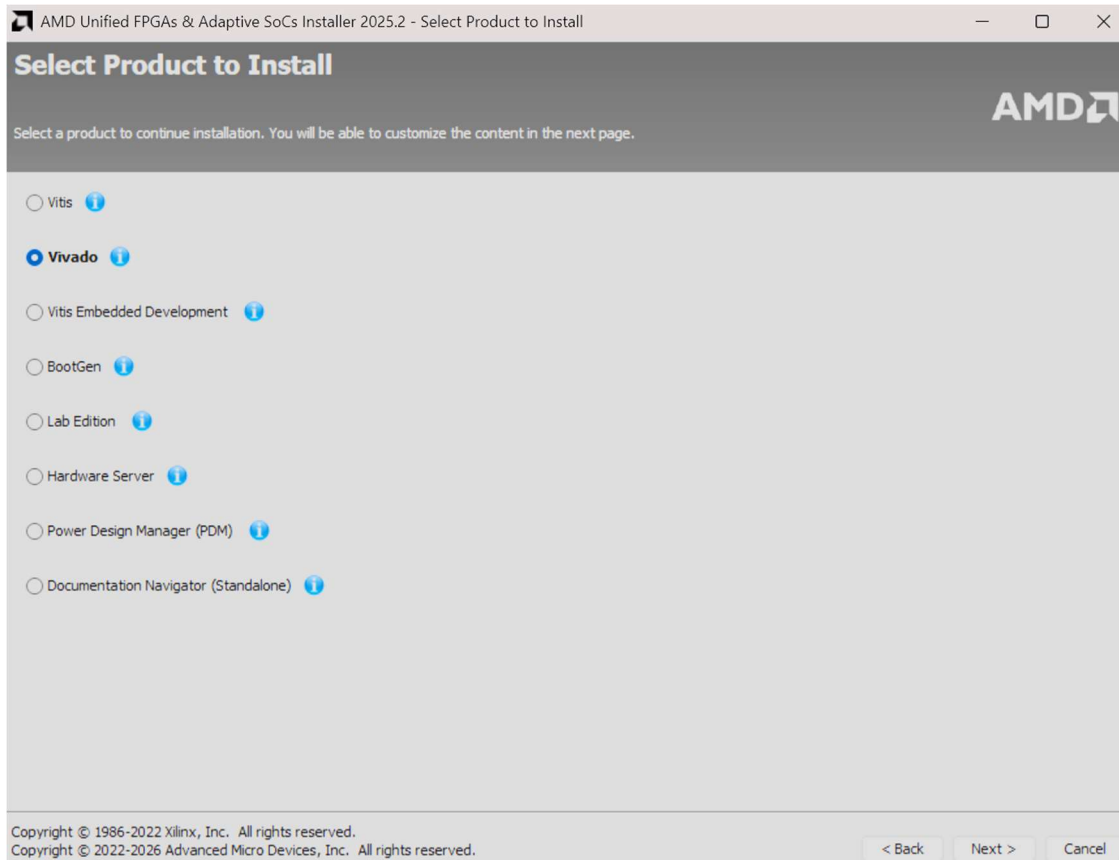

2. Once downloaded, run the installer and the first prompt indicating supported versions for the tool, just review and click Next

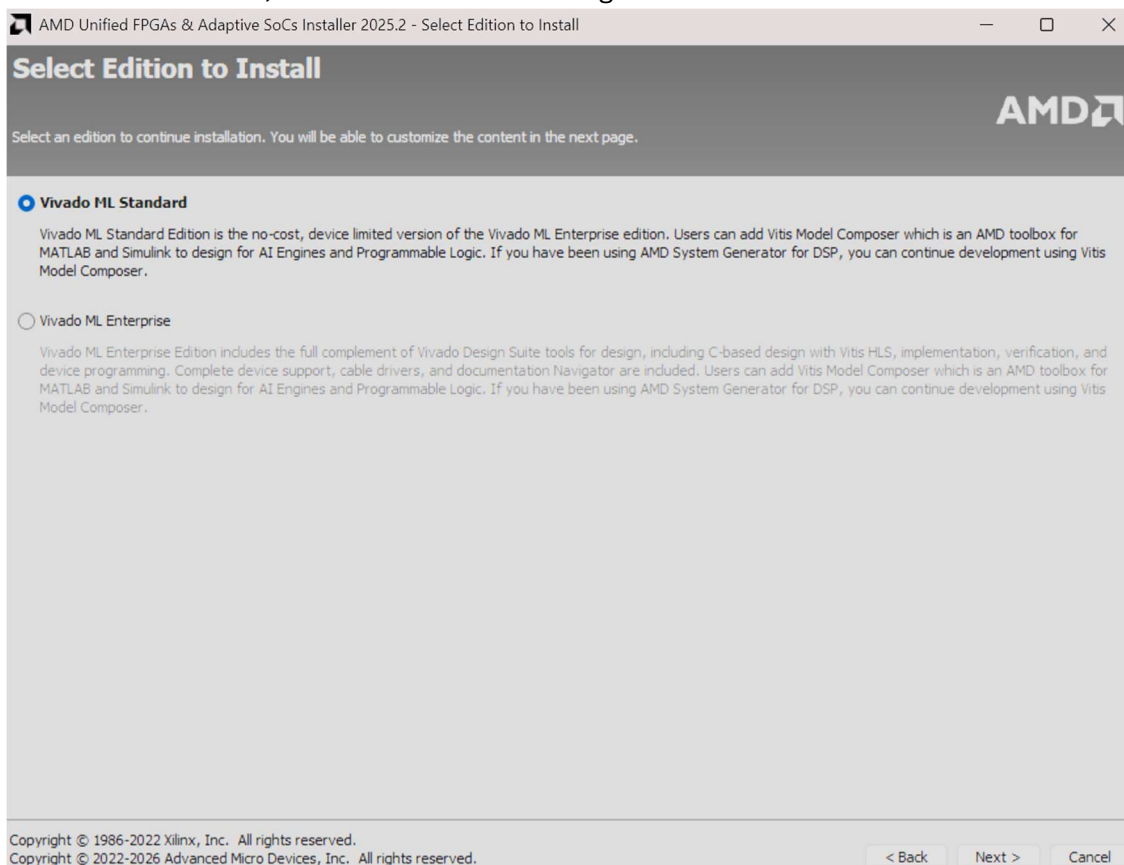

3. Now re-enter your AMD account information and click Next

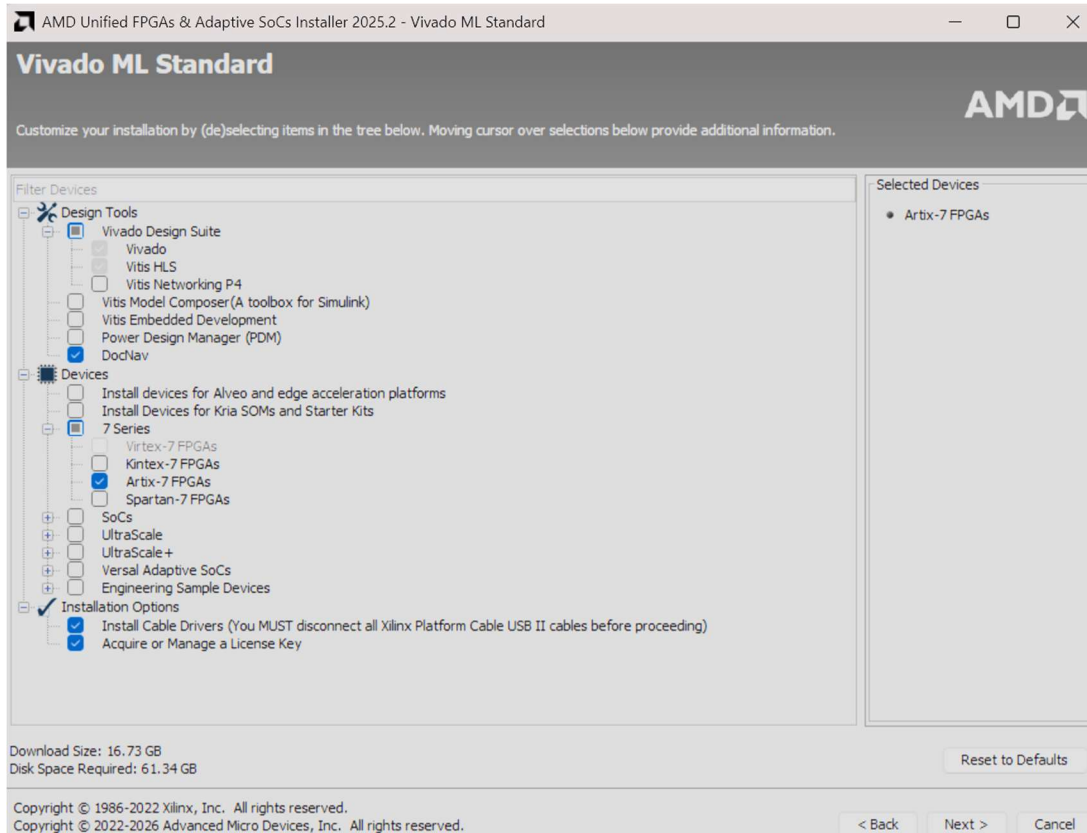

4. The next page selects the Tool to install, select Vivado for this step. We will **not** be using Vitis, which includes Software Development tools.

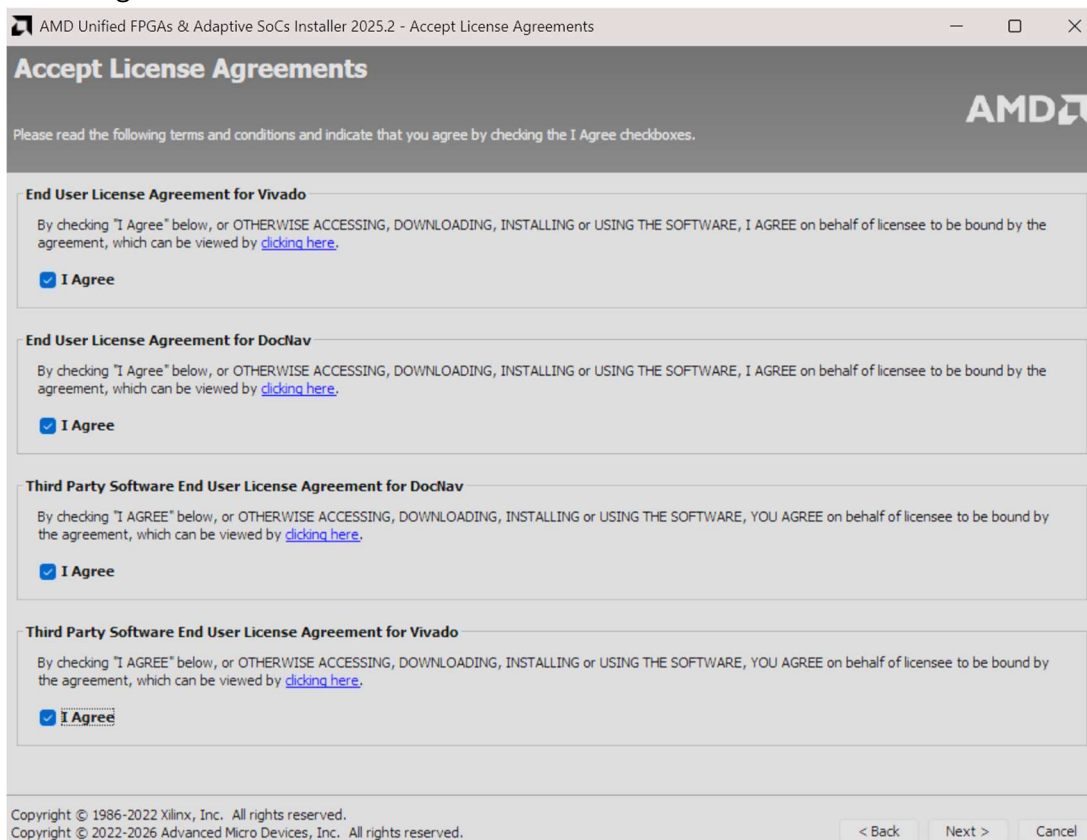

5. For the version, make sure to select Vivado ML Standard, which is the free edition of the tools. Do **NOT** install other editions, which have other licensing constraints.

6. Select the components of the tool to install, which can be left as the default. You can also remove UltraScale, SoC devices, or DocNav to save space if you are running out of room for this install. Make sure to keep Artix-7 FPGAs selected as shown below.

7. Click 'I Agree' on the licenses for the tools.

8. Select the install path, which should be left as the default or changed to a root path folder of your choice.

9. The last step is to confirm your install settings, which should look similar to what I have below with the exception of the install path you've selected. Finally, click install and it will go through the lengthy installation process.

10. Congrats on installing Vivado. After install, please go back to Module 1 and start with the Lab 1 Tutorial to get started. If you have any questions on install or getting started with Vivado, make sure to post in the Student Introductions your experience or any questions in the Topics for Clarification discussion group.

Since this is Vivado Standard ML edition, any licensing can be skipped and is not required for this toolchain.
